

DAO ANH TU

Computer Science Student | AI in Security | Web Security | AI/ML & IoT

Hanoi, Vietnam | (+84) 935 530 790 | anhtubibi@gmail.com | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Proactive Computer Science student at SoICT-HUST focusing on AI in Security, Web Security, and IoT. Experience spans LLM-based malware family classification, no-code/low-code AI workflow platforms, practical web vulnerability testing, and security-focused product prototyping. Currently interested in applying ML, LLMs, and graph-based methods to malware analysis, AIoT Security, Network Security, and AI Security.

EDUCATION

2024 - 2028 | Hanoi University of Science and Technology (HUST), School of Information and Communications Technology (SoICT)
Bachelor of Computer Science | Current CPA: 3.35/4.0

Google Prompting Essentials | Google | 12/2025 | Credential ID: Z0M9M4ER0OF4

Foundations of Cybersecurity | Google | 12/2025 | Credential ID: 6876H2J1WBV8

TECHNICAL SKILLS

Languages	C/C++, Python, SQL, PHP, JavaScript
AI/ML	Machine learning fundamentals; supervised/unsupervised learning concepts; data preprocessing; feature engineering; model fine-tuning; evaluation metrics; error analysis; experiment design basics
LLM & AI Workflow	LLM-based classification; fine-tuning experiments; prompt/workflow design; no-code/low-code AI pipelines; multi-agent workflow concepts
Graph & Data	Graph theory fundamentals; graph representations; graph algorithms basics; introductory GNN concepts such as node/graph classification and message passing; data normalization and processing
Security	Web security fundamentals; vulnerability analysis; exploit simulation; payload crafting; security testing workflows; malware family classification; robustness and explainability for AI Security
Vulnerabilities	SQLi, XSS, CSRF, CORS/SOP-related issues, File Upload, Path Traversal, LFI/RFI, SSRF, XXE, IDOR, BAC, Business Logic flaws, SSTI, Insecure Deserialization (Pickle), Race Conditions
Tools	Git, Burp Suite, Nmap, Wireshark, Linux, Docker, Metasploit
Soft Skills	Fast learning, analytical thinking, project ownership, presentation, teamwork, problem-solving, adaptability

RESEARCH & EXPERIENCE

03/2026 - 06/2026 | LLMal: A Robust and Explainable Framework for Malware Family Classification

Submitted to The IEEE International Conference on Data Mining (ICDM), Security Track/Workshop (CORE A conference)*

Co-author (4th author out of 6)

- Contributed to research ideation, methodology design, and the development of an LLM-based malware family classification framework.
- Designed and implemented the experimental pipeline, including malware dataset preparation, preprocessing, and normalization for training and evaluation.
- Conducted fine-tuning experiments, evaluated model performance across multiple metrics, and analyzed results to improve model effectiveness.
- Participated in robustness and explainability analysis for AI-based malware classification.
- Contributed to manuscript writing, figure/table generation, and presentation of experimental findings.

2026 - Present | Research Student, Business AI Lab (BAILab)

Current focus: AI in Security

- Working on AI-related research activities with a focus on applying ML/LLM methods to security problems.
- Exploring AI workflow design, multi-agent systems, evaluation practices, and practical AI-security use cases.

07/2025 - 01/2026 | Team Leader, VNPT Cyber Immunity (VCI) Internship, Hanoi

- Led team coordination and contributed to practical web security testing, vulnerability analysis, and lab-based assessment workflows.
- Investigated and practiced exploitation scenarios involving SQLi, XSS, CSRF, CORS/SOP issues, File Upload, Path Traversal, LFI/RFI, SSRF, XXE, SSTI, Insecure Deserialization, IDOR, BAC, Business Logic flaws, and Race Conditions.
- Reproduced issues, documented testing steps, and presented technical findings to improve communication and assessment quality.

HONORS & COMPETITIONS

01/2026 - 02/2026 | BAISudio - AI Workflow Platform | 2nd Prize, SCIC 2026 (SoICT, HUST)

A no-code/low-code platform enabling technical and non-technical users to design, customize, and execute end-to-end AI workflows.

Team Leader

- Led the product lifecycle from ideation and research to development, testing, prototype validation, and final demonstration.

- Designed and developed core workflow features inspired by tools such as n8n, with stronger usability for non-technical users.
- Built an intuitive guided interface for creating and managing AI workflows, and improved usability by reducing workflow configuration complexity.
- Collaborated with the team to shape product direction and deliver a working prototype that won 2nd Prize.
- **GitHub:** [oktutay/BAIStudio](#)

2026 | MalEvo - AI Malware Analysis Platform | 2nd Prize, SCIC 2026 (SoICT, HUST)

Automated tier-2 malware analysis for SOCs with explainable, static, and zero-day-aware AI.

Team Leader

- Led the productization of the team's LLMal research framework into an automated static-analysis workflow for SOC analysts.
- Integrated GNN-based malware family classification, MITRE ATT&CK mapping, model-grounded explainability, and zero-day variant signaling.
- Delivered ~12-second/file analysis without GPU or sandbox; classifies 6 malware families with 97.71% F1 (10-fold).
- **GitHub:** [Hibiscus-Company/MalEvo](#)

02/2025 - 04/2025 | SimuGuard - Security Project | 3rd Prize, SCIC 2025 (SoICT, HUST)

Platform for simulating, analyzing, and recommending personalized solutions against common malware threats.

Team Leader

- Proposed the original project direction and research approach for a malware-focused security platform.
- Analyzed and simulated realistic cyberattack scenarios, then improved the system through iterative testing and limitation fixing.
- Contributed to the development of security "vaccine" modules, product testing, and demonstrations.
- **GitHub:** [oktutay/SimuGuard](#)
- **Documentation:** [Project Documentation](#)

2025 | Data4Life Competition - Preliminary Round Participant

Competition organized by the Ministry of Public Security

- Participated in the preliminary round and gained exposure to data-driven problem solving in a national competition setting.

PROJECTS & LEADERSHIP ACTIVITIES

09/2021 - 10/2021 | Personal SmartCard - IoT Project

Owner

- Researched and selected NFC-A (ISO/IEC 14443A) as the suitable smart card technology standard.
- Designed a personal web interface, completed implementation, and iteratively tested and improved the system.

03/2022 - 04/2022 | NKT_LVC Team - Robocon by HCMUTE

Team Leader

- Researched terrain constraints, proposed design strategies, implemented the control system, and improved system responses to unexpected situations.

Present | Member of the STEM Committee, SoDITEC

Club for Digital Transformation in Education

- Contribute to STEM-related and digital transformation activities in the education community.

Former | Member, BKSec - HUST Information Security Club

- Participated in cybersecurity learning activities and community events at Hanoi University of Science and Technology.

2025 | Participant, Hoan Kiem District Digital Transformation Exchange

- Joined professional discussions and exchange activities on digital transformation initiatives in Hoan Kiem District.

ACHIEVEMENTS & RECOGNITION

2026: Research student at Business AI Lab (BAILab); two 2nd Prizes at SCIC 2026 (BAIStudio and MalEvo).

2025: Internship at VNPT Cyber Immunity (VCI); 3rd Prize at SCIC 2025 in cybersecurity.

2024: Selected for the Phu Yen provincial team for the 2024 National Excellent Student Competition; early admission to SoICT-HUST in Computer Science.

2021 - 2023: Consolation Prize in school-level scientific research competition; First Prize in Robocon competition organized by HCMUTE; First Prize in the provincial Physics competition.

ENGLISH & INTERESTS

English: IELTS 5.0; actively improving technical reading, research writing, and academic communication.

Interests: Sports, film watching and reviewing, exploring new technologies, creative activities, and debating.
